## Security Posture Report

### SECURITY POSTURE REPORT

#### Executive Summary

This report covers the security posture of all managed endpoints and the Active Directory domain. Assessment includes endpoint configuration, Group Policy enforcement, and domain-level security controls.

# Security Posture Report

Active Directory — ahts.me.com

| Security Control      | Status             | Finding                                |
|-----------------------|--------------------|----------------------------------------|
| BitLocker Enforcement | Not Configured     | No BitLocker Group Policy detected     |
| Defender Enforcement  | Not Configured     | Defender not enforced via Group Policy |
| Windows Update Policy | Not Configured     | WSUS policy absent                     |
| DNS Scavenging        | Disabled           | Stale DNS records accumulating         |
| Password Policy       | Attention Required | 3 accounts with password never expires |
| Stale Computers       | Attention Required | 3 of 4 computer accounts inactive 90d  |

#### Endpoint Security Summary

All 4 managed endpoints were assessed against baseline security controls.

- **DESKTOP-JOGTI06** — Defender enabled, firewall active, BitLocker not configured
- **DESKTOP-AHJ0FL9** — Defender enabled, firewall active, BitLocker not configured
- **BasementPC1** — Defender enabled, 3 pending updates
- **AHTSDC1** — Domain controller, Windows Server 2019

#### Recommendations

- Implement BitLocker enforcement via Group Policy for all workstations
- Configure Windows Defender settings in Group Policy
- Deploy WSUS or Windows Update for Business
- Enable DNS scavenging on the DNS server
- Review accounts with password never expires
